UTKARSH JAISWAL

Aspiring Data Analyst • AI & Data Science Undergraduate

utkarsh2172006@gmail.com | +91 9236064084 | linkedin.com/in/utkarsh-jaiswal-7b2938376 | github.com/utkarsh2172006-design | India

PROFESSIONAL SUMMARY

Undergraduate BS Applied AI & Data Science student at IIT Jodhpur with hands-on experience in Python, SQL, Excel, Power BI, and Tableau through real-world projects and job simulations. Skilled at transforming raw data into clear, business-relevant insights via data cleaning, exploratory analysis, and interactive dashboards. Completed virtual data analytics simulations with Quantium and Deloitte Australia, building expertise in customer behaviour analysis, telemetry data, and uplift testing. Seeking a Data Analyst internship to apply analytical thinking and visualization skills in a professional setting.

EDUCATION

BS in Applied AI & Data Science | Indian Institute of Technology (IIT) Jodhpur | 2025 – 2029 (Expected)
Year: 1st Year Completed | **CGPA:** 7.25 / 10
Relevant Coursework: Probability & Statistics, Linear Algebra, Programming in Python, Database Management Systems, Data Structures, Foundations of Machine Learning

Higher Secondary (Class XII) – PCM | CBSE / State Board | 2025
Physics, Chemistry, Mathematics

TECHNICAL SKILLS

Programming: Python (pandas, numpy, matplotlib, seaborn), SQL
Data Analysis: Exploratory Data Analysis (EDA), data cleaning & wrangling, customer segmentation, uplift testing, statistical analysis
BI & Visualization: Power BI, Tableau, Microsoft Excel (pivot tables, formulas, charts)
Databases: SQL (SELECT, WHERE, GROUP BY, JOINs, subqueries)
Tools & Concepts: Git & GitHub, Jupyter Notebook, scikit-learn (basic), foundations of ML and statistics

PROJECTS & JOB SIMULATIONS

Data Analytics Virtual Internship | Quantium (via The Forage) | 2025

- Processed and cleaned customer transaction data using Python (pandas), handling missing values and inconsistencies to build an analysis-ready dataset.
- Explored purchasing patterns and performed customer segmentation to uncover actionable trends in buying behaviour across product categories.
- Designed a benchmark/control store comparison and applied uplift testing logic to isolate the impact of a trial layout change on sales performance.
- Translated statistical findings into commercial insights and actionable recommendations for category management, delivered in a business-ready format.

Tools: Python, pandas, matplotlib, Excel

Data Analytics Virtual Internship | Deloitte Australia (via The Forage) — Client: Daikibo Industrials | 2025

- Analyzed manufacturing telemetry data to identify data quality issues and understand equipment performance patterns across multiple factory sites.
- Built interactive dashboards to visualize operational metrics, making equipment health and performance trends easy to monitor at a glance.
- Identified recurring operational patterns and summarized findings into business insights supporting maintenance scheduling and efficiency decisions.

Tools: Excel, Tableau / Power BI

CERTIFICATIONS

- **Quantium Data Analytics Job Simulation** | The Forage | 2025
- **Deloitte Australia Data Analytics Job Simulation** | The Forage | 2025

CORE STRENGTHS

Analytical Thinking • Self-Learning • Adaptability • Business Understanding • Problem Solving • Data Storytelling
